PROMPT:

Act as an expert and schedule a timetable for a beginner-friendly learning plan on the topic of Generative AI. The study plan must be for 30 days, and it should include all the core and overall topics in Generative AI. It must include weekly goals for the learner to maintain easy understanding and eagerness to complete the course, along with weekly topics for proper understanding of each subtopic. Each week should focus on one subtopic, covering all the contents related to that subtopic. Include practice tasks for checking the learner's knowledge, tools for an interactive learning environment, and assessment methods for learners to evaluate their scores, knowledge, progress, and learning streak. Now, schedule a study plan including all these requirements.

ANSWER:

Here's a structured, beginner-friendly 30-day study plan for Generative AI designed like an expert curriculum. It's divided into 4 weekly modules (1 subtopic per week), each with goals, daily schedule, practice tasks, tools, and assessment methods so you can track progress and stay motivated.

🚀 30-Day Generative AI Learning Plan (Beginner → Strong Foundation)

📅 OVERVIEW

- Duration: 30 Days
- Daily Time: 1.5–3 hours
- Structure:
  - Week 1 → Foundations of AI & ML
  - Week 2 → Deep Learning & Neural Networks
  - Week 3 → Core Generative AI Models
  - Week 4 → Applications, Tools & Projects

🧠 WEEK 1: AI & MACHINE LEARNING BASICS

🎯 Goal:

Understand how AI works, core ML concepts, and prepare for generative models.

📚 Topics Covered:

- What is AI, ML, DL
- Supervised vs Unsupervised learning
- Data, features, labels

- Model training basics
- Evaluation metrics

🗓️ Daily Plan:

- Day 1: Introduction to AI & real-world use cases
- Day 2: Machine Learning types
- Day 3: Data handling & preprocessing
- Day 4: Basic algorithms (Linear Regression, Classification)
- Day 5: Model evaluation (accuracy, precision, recall)
- Day 6: Hands-on: simple ML model
- Day 7: Revision + mini test

🛠️ Tools:

- Python, Google Colab
- Scikit-learn
- Kaggle (datasets)

☑️ Practice Tasks:

- Build a simple prediction model
- Identify type of ML problem (classification/regression)

📊 Assessment:

- Quiz (10–15 questions)
- Mini project: Predict dataset outcome
- Score target: ≥70%

🤖 WEEK 2: DEEP LEARNING & NEURAL NETWORKS

🎯 Goal:

Understand neural networks (foundation for generative AI)

📚 Topics Covered:

- Neural networks basics
- Layers, activation functions
- Backpropagation
- CNN (intro)
- RNN (intro)

🗓️ Daily Plan:

- Day 8: Neural network intuition
- Day 9: Activation functions (ReLU, Sigmoid)
- Day 10: Training process & backpropagation
- Day 11: CNN basics
- Day 12: RNN basics
- Day 13: Build simple neural network
- Day 14: Revision + test

🛠️ Tools:

- TensorFlow / Keras
- PyTorch (optional beginner intro)

☑️ Practice Tasks:

- Build a digit classifier (MNIST)
- Visualize training accuracy

📊 Assessment:

- Practical coding task
- Conceptual quiz
- Score target: ≥75%

🎨 WEEK 3: GENERATIVE AI CORE CONCEPTS

🎯 Goal:

Understand how Generative AI models actually generate content

📚 Topics Covered:

- What is Generative AI
- Large Language Models (LLMs)
- Transformers (core concept)
- GANs (Generative Adversarial Networks)
- Diffusion models (basic idea)

🗓️ Daily Plan:

- Day 15: Intro to Generative AI
- Day 16: LLMs & text generation

- Day 17: Transformers (attention concept)
- Day 18: GANs
- Day 19: Diffusion models
- Day 20: Prompt engineering basics
- Day 21: Revision + test

🛠️ Tools:

- OpenAI Playground / APIs
- Hugging Face
- Chat-based AI tools

☑️ Practice Tasks:

- Generate text using prompts
- Compare outputs with different prompts
- Try basic image generation

📊 Assessment:

- Prompt design challenge
- Explain model differences
- Score target: ≥80%

🛠️ WEEK 4: APPLICATIONS, PROJECTS & ADVANCED USAGE

🎯 Goal:

Apply knowledge and build real-world Generative AI projects

📚 Topics Covered:

- AI tools & ecosystems
- Fine-tuning basics
- AI ethics & bias
- Real-world applications
- Deployment basics

🗓️ Daily Plan:

- Day 22: Gen AI tools overview
- Day 23: Prompt engineering advanced
- Day 24: AI ethics & risks
- Day 25: Build chatbot

- Day 26: Image/text generation project
- Day 27: Improve & optimize project
- Day 28: Final project completion
- Day 29: Project testing & evaluation
- Day 30: Final assessment + portfolio

🛠️ Tools:

- Hugging Face Spaces
- Streamlit (for apps)
- OpenAI API
- Canva / Midjourney-like tools

☑️ Practice Tasks:

- Build chatbot or text generator
- Create AI-based content generator
- Deploy simple app

📊 Assessment:

- Final project (major evaluation)
- Peer/self review
- Score target: ≥85%

📈 PROGRESS TRACKING SYSTEM

📃 Daily Tracking:

- Time spent
- Topic completed
- Practice done (Yes/No)

🔥 Weekly Streak:

- Complete ≥5 days = success
- Missed days → catch up on weekend

📊 Scoring Breakdown:

- Weekly quizzes → 30%
- Practice tasks → 30%
- Final project → 40%

🎯 FINAL OUTCOME (After 30 Days)

By the end, you will:

- Understand core AI & ML concepts
- Know how Generative AI models work
- Be able to use AI tools effectively
- Build and present a real project
